

Rejista — one short speech per person

Ten slides, about six minutes in total. Each speech is written to be said out loud, not read off the slide. Say your own numbers; leave the rest to the person after you.

#	Slide	Who speaks	Time
1	Title + QR	Pascal	0:40
2	The problem	Pascal	0:35
3	Why they stay invisible	Shamin	0:35
4	How it works	Omar	0:40
5	One flat fee	Bello	0:40
6	Registration is the wedge	Bello	0:30
7	The pilot + thresholds	Olu	0:45
8	Two questions could end this	Pascal	0:40
9	The team / what we are not	Shamin	0:30
10	The ask	Pascal	0:40

Total running time about 5 minutes 55 seconds, leaving room for questions. The two unverified figures on slide 2 and the placeholder contact details on slide 10 are flagged in the deck — say so out loud if asked.

PASCAL • 2:35 ACROSS FOUR SLIDES

Pascal

Partnerships (CAC path), go / no-go — opens and closes

Slide 1 — Title and QR (0:40)

Good morning. We are Rejista. Before I say anything else, point your phone at the code on the screen. It opens our real registration form — the same one a trader in Balogun market would use. It takes about ten minutes and it takes no payment, because this is a demonstration build: nothing is filed with the government yet. Keep it open while we talk.

Hand-off: Hand to yourself — stay on for slide 2.

Slide 2 — The problem (0:35)

Nigeria has roughly forty million small businesses, and about nine in ten of them are not registered. I want to be careful with those two numbers: they come from the SMEDAN and NBS survey and we have not finished checking them, so they are marked here as unverified. What is not in doubt is the consequence. If you are not on the register, a bank cannot open you an account, and a big buyer cannot put you on a contract.

Hand-off: Hand to Shamin: “Shamin will tell you why they stay off it.”

Slide 8 — Two questions could end this (0:40)

Two questions could end this project, and neither is answered yet. First: can we file on someone's behalf at all? There is no public filing interface at the Corporate Affairs Commission. The route is an accredited channel, and confirming it is week one, before another line of code. If the answer is no, we stop. Second: does being registered actually help? The research on formalisation is mixed. So we ask every applicant at sixty days whether it got them anything real — and we publish the answer either way.

Hand-off: Hand to Shamin for the team slide.

Slide 10 — The ask (0:40)

So: what is built is the form you just scanned. What it costs the customer is seventeen thousand five hundred naira, flat. And there are three things we want from this room. One, an introduction to an accredited filing channel — that is the week-one question. Two, support to run the eight-week pilot. Three, a hard read: tell us which of those five thresholds you would not accept. The code is on the screen again — scan it before you leave. Thank you.

Hand-off: Stay on slide 10 for questions.

OLU • 0:45, ONE SLIDE

Olu

Operations, field agent, filing — owns the pilot

Slide 7 — The pilot and what has to be true (0:45)

Here is what we actually run. One market — Balogun, in Lagos. Between one hundred and two hundred registrations. Eight weeks. And every one of them filed by a person, by hand — not by an API. Our rule is: fake the back end, make the front end real. The customer experience is real; I am the back end. On the right are the five numbers we wrote down before we started. Forty per cent finish the form. Half of those pay. Ninety per cent get approved. Certificates inside three days. Seventy per cent would refer a friend. If we miss them, we do not raise — and we will have learned that for a few thousand dollars instead of several hundred thousand.

Hand-off: Hand back to Pascal: "Pascal has the two questions that could end this."

Omar

Product and tech build — owns the live form

Slide 4 — How it works (0:40)

Three steps. First, you answer a few questions in your own language — no paper forms, no office to visit, no agent to chase. That is about ten minutes, and it is the part you just did on your phone. Second, we verify and file: your ID confirms who you are, we check the business name is free, and we file it with the Commission. That middle step is the one you pay for — it is in navy on the slide for a reason. Third, your certificate and tax number come back, and that is enough to open a business account yourself. The government's part takes as long as it takes; what we add is that you can always see which stage you are at.

Hand-off: Hand to Bello: "Bello will tell you what it costs."

Bello

Budget and unit economics — owns the price

Slide 5 — One flat fee (0:40)

One price, and you see it before you pay anything. Seventeen thousand five hundred naira in total. Seven thousand five hundred of that is our service fee. Ten thousand is the government's own charge — it goes to the Commission, not to us. I want to be straight about the comparison: an agent charges a comparable all-in. We are not cheaper. We compete on you knowing the price up front, being able to check your own case, and getting your fee back if we fail.

Hand-off: Stay on for slide 6.

Slide 6 — Registration is the wedge (0:30)

Registration is the wedge, not the business. A registered trader then needs an account, a card machine, working capital and cover — money in, money to grow, protection, and staying right with the annual filings. We take a share when they take one of those up, and never a cut of their sales. Being honest about the state of it: six of the twelve services on that roadmap need a partner we have not signed yet.

Hand-off: Hand to Olu: "Olu runs the pilot that tests all of this."

Shamin

Compliance — NDPA, DPIA, consent

Slide 3 — Why they stay invisible (0:35)

The usual way in is an agent who charges what they feel like, takes as long as they take, and then stops answering the phone. So registration is not mainly a cost problem — it is an uncertainty problem. Three unknowns: you do not know the price up front, you cannot see whether anything is happening, and you have no recourse if it fails. Remove those three and you have a product. Discounting the price would not have fixed any of them.

Hand-off: Hand to Omar: "Omar will show you how it works."

Slide 9 — The team, and what we are not (0:30)

Five of us, and every risk that can kill this has one named owner — including mine, which is data. We handle national ID numbers and photographs, so the data protection assessment, the retention rule and the breach plan are done before the first real applicant, not after. And the line at the bottom matters: we are not the government. Rejista is a filing agent. The certificate is issued by the Corporate Affairs Commission. You could file it yourself — what you pay us for is not having to.

Hand-off: Hand back to Pascal for the ask.
